

Mobile Computing Individual Assignment

- It should display well organized Form. (a combination of different view component including image from gallery and Date Picker Dialog).

N.B When demonstrating how to pick an image from the gallery, try using both `startActivityForResult` and the Activity Result API. Make sure to understand the differences between them.

- The form should be multi-lingual (Amharic and English).

- The values of each form elements should be displayed in another activity.

- The form should handle configuration changes.

- Try to use option menu and floating context menu. (if you use contextual menu action bar it will be better as reward).

- View Binding should be used to access view elements.

Deadline:

Submission is due in **1 week**, with a possible **1-week extension** if needed
